

POWDERCOATED
STEEL WOVEN WITH
POLY CORD

THEURBANATIVE

Lights

Care

To clean and maintain the powder coated finish, wipe surfaces with soft damp cloth, on occasion a soft brush can be used for stubborn dirt .After wiping with the damp soapy cloth make sure to gently wipe any soap residue with a soft dry cloth. Filtered water should always be used as unfiltered water sometimes has trace abrasive elements such as sulphur/ iron oxide, in addition do not expose your powder-coated pieces to abrasive solutions with chlorine, saltwater, fluoride.

For outdoor furniture or furniture to be used at the coast we urge the client to notify TheUrbanative in order for us to treat the steel accordingly via a process of e-coating or using galvanised steel components. In order to further protect our steel planters , we rubber line the inside to stop any water seepage into metal crevices. Please note that eventually corrosion will result overtime for items in humid or coastal areas.

Warrantees

Almost all powder contains UV protectants that maintain colour and gloss. The powdercoating is warranted for 3 years (indoor) & 2,5 years (extreme outdoor); provided that no structural damage has occurred and that the cleaning guidelines provided are followed.

Powdercoated Steel

Care

Clean using a diluted, mild detergent with a soft mildly damp cloth, taking care not to rub too hard as this will affect the weave, the rope elasticity and the glue.

Only spot clean when necessary. Clean spots with damp soft cloth dry in shaded area.

Warrantees

The workmanship of the weaving is warranted for 2-3 years depending on handling. The PVC awning cord is meant for outdoor purposes; according to the manufacturer/supplier guidelines, however in coastal and outdoor uses yacht grade rope is used.

Awning cord
