### **Cleaning Instructions - Bodulo bench in plywood & cork**

The dark composite grade cork used for the bench seat is 100% natural and biodegradable, the material however contains a small amount of adhesive in order to bind the granules, making it extremely durable and user friendly.

Clean the cork seat and plywood body once a month, depending on the circumstances, by using a damp soapy cloth. (A small amount of detergent with warm water will be sufficient).

Please do not use abrasive pads such as a sponge scourer, as the cork and the African pattern / artworks may damage or be removed if the product is not gently cleaned.

Wipe or dab the product dry with a clean cotton cloth and do not wet the cork material excessively. It is advised to apply a minimum amount of water and detergent to protect both materials for prolonged longevity and to ensure the bench dries quickly.

These benches are manufactured from solid cork, therefore if the material changes color due to exposure to UV light, the cork can be lightly sanded to obtain the same finish that was originally supplied. Alternatively, the cork will age naturally and remain durable, beautiful and perfectly useable.

Please note that Wiid Design cannot be held liable for malicious damage or negligent cleaning of these benches.
